

World Archery's Beat the Outbreak target – week 9. This is a target that will test your third axis, or the straightness of your sight (/aiming, if barebow).

You're going to shoot 15 arrows at a distance of maximum 5 metres. And you're going to always aim at the white spot.

Set your sight at five metres and shoot three arrows, one at each white spot. Then move your sight to 15 metres and shoot three arrows, one at each white spot. Then at 25, 35 and 45 metres. (Sight marks indicative, as long as you move a bit, you should end up with arrow holes going up the paper.)

The score is how many colours your arrow holes touch in each column (then added together, score each column and then add them up). Black does not count as a colour. The minimum score (highest) is three; the maximum score (lowest) is 15.
